PLANTERS WHOLESALE

PRICE LIST

NUMBER FIFTY-FOUR

SPRING OF 1920

AUGUSTINE & CO.

NURSERYMEN
LANDSCAPE GARDENERS

NORMAL, - - ILLINOIS

ATTENTION

There is the greatest shortage in all kinds of Nursery Stock ever known in the U.S. Not one-third enough to supply the demand for this spring, with no relief in sight. It takes 2 to 5 years or more to grow plants. There will be more poor and cull stock sold this year than ever before. Use more care than ever in buying from reliable Nurseries.

Order early or you will stand but little chance of getting what you want.

Descriptive Illustrated Catalog sent on Request

DISCOUNTS

Allowed on all orders amounting to 5.00 or over.

FOR SPRING

5 per cent on orders placed during February.

3 per cent on orders placed during March.

Cash must accompany order for the full amount when discounts are allowed. The discount we allow is usually enough to pay the cost of freight, and saves us expense in bookkeeping.

An extra charge of 50 cents for packing will be made on all orders amounting to less than \$1.00.

- SIZE OF PLANTS -

Two to three foot plants mean plants two feet in height. Three to four foot plants mean plants three feet in height.

When plants are ordered three feet in height the price is for three to four foot plants. When ordered two feet in height the price is for two to three foot plants. There is positively no variation from this rule. as all stock is graded and priced

An Editorial from The Country Gentleman,

September 6, 1919.

This editorial speaks more tersely for one of America's fundamental industries than could have been written by the nurseryman himself. The authority of America's "oldest agricultural journal" is beyond question and the conclusion is obvious.

The home owner or orchardist intending to plant trees of any kind now or within five years must anticipate his needs, place his order early with a "real nursery", and pay a price based on the cost of production and the law of supply and demand, proportionate with other commodities.

A JOB FOR NUBSERYMEN

HE propagation of fruit plants is an art. It takes two, three or four years to develop nursery stock to planting size. The war cut down propagation work to an unprecedented degree. France, from which come most of the seedlings used by nurserymen, has been able to grow and ship but a fraction of her normal output. The supply of nursery stock for planting this fall and next spring is short. Fruit stocks will be shorter next year than this. Hundreds of small nurserymen are out of business and more must suspend with the digging of the plantations now maturing, because of inability to secure seedlings for new plantations.

Fall prices are higher than ever known and may well be higher yet by spring. Prices are expected to make a record peak in the fall of 1920 and spring of 1921. Since peach trees are propagated wholly upon American stocks and since they can be produced in two years, it seems reasonable to expect that peach-tree prices should be reasonably stabilized by the spring of 1922, but the prices for apple, cherryl plum, pear and quince trees may remain abnormal for some years after the French growers get readjusted. It is not at all certain when that will be.

All this is, of course, perfectly understood by the professional nurserymen, but it is not understood by the folks who buy and plant what the nurseryman sells. Planters should appreciate the situation for two very excellent reasons: First, because the supply of many standard varieties is almost certain to be exhausted before long. That means that orders should go in earlier than ever before. Always urgent, this year and next it may be imperative. ORDERS SHOULD GO IN EARLY.

Second, shortage and high prices are pretty sure to bring out all manner of old, oversize, runty and generally inferior and undependable stuff which will be offered to buyers under unusual and high-sounding descriptions. There never was a time when the planter needed to use more caution in his purchases. BEWARE OF THE FLY-BY-NIGHT SALESMAN OF NURSERY STOCK.

It is the immediate duty of every agricultural college, experiment station, county agricultural agent and secretary of a horticultural society to

revise his list of dependable nurserymen. The inexperienced planter who fails to consult with those really competent to advise him will be entitled to little sympathy if his new orchard turns out a failure. Even old-timers in the fruit-raising business may very well see to it that their lightning rods are well grounded.

The nursery business is difficult and hazardous to a degree not appreciated by the planter. Too often the planter has been able to buy good stock at less than the cost of production. Too often the faithful and conscientious propagator has received neither appreciation nor a fair money return. Too often the slick agent and the brass-band catalogue have got the planter's money, leaving the planter and the honorable nurseryman to hold the bag.

For long and trying years the nursery business has been conducted in a manner satisfactory to neither the on-the-square producer of nursery stock nor to the ultimate user of that stock. If it is true that the public has never appreciated the good nurseryman, it is also true that the good nurserymen have never pulled together long enough nor hard enough to clean up their industry. They have provided no way by which the average planter can distinguish between the dependable firm and the get-rich-quick rascal.

It is because of this that legislation and regulation of the nursery business become constantly more severe. The next year or two will bring things to a head. If the on-the-square nurserymen of the country permit the scalawag members of the industry to take advantage of the present situation to the general detriment of the fruit-growing public, they may expect, very shortly, a mass of legislation of such character as may put the business of plant propagation upon a new basis. Fruit growing is too important to be put in jeopardy, piecemeal, through petty trickery, or wholesale, through the dissemination of pests and diseases.

It is up to the planter to recognize thoroughly good stock and to pay a fair price for it, but it we up to the respectable nurseryman to raise the standard of ethics in his trade and to provide a sure means of identifying himself.
